

Vibhu Gautam

Analytics, Data, Integration, Automation & AI Delivery Leader

+91 9317860077 | vibhu.gautam7@gmail.com | linkedin.com/in/vibhugautam7

PROFILE

Analytics, data and AI leader with more than 12 years of experience across Nestlé, McKinsey, BCG, Micron, the University of York and academia. Experienced in leading cross-functional analytics delivery, translating market and business needs into scalable data products, improving analytical operations, and coordinating stakeholders across India, the UK, Japan and global teams. Combines portfolio execution, product-roadmap influence, automation, responsible AI, data quality, partner collaboration and executive communication. Strong record of converting complex business questions into reusable platforms, standardized workflows and decision-support solutions.

REGIONAL ADI LEADERSHIP CAPABILITIES

Regional Delivery & Portfolio Leadership: prioritization, execution governance, delivery risks, milestones and business alignment

Operational Excellence: data quality controls, standardized workflows, model assurance, service reliability and continuous improvement

Automation & Transformation: workflow automation, reusable business logic, reporting industrialization and legacy simplification

Adoption & Value Realization: user engagement, executive narratives, practical decision frameworks and movement from reporting to action

Selected portfolio: **People Analytics Intelligence Lab** – strategic workforce planning, benchmarking, causal retention, organization diagnostics and employee-risk analytics.

Global Product & Roadmap Alignment: requirement translation, platform fit, reusable product thinking and stakeholder influence

Data, Analytics & AI Products: predictive analytics, causal methods, responsible AI, dashboards and decision-support products

Stakeholder & Partner Leadership: multi-country collaboration, senior communication, consulting engagement and delivery coordination

Tools & Methods: Python, SQL, Spark/PySpark, Power BI, Tableau, Excel, Bayesian statistics, machine learning and benchmarking

EXPERIENCE

Professor of Practice – Computer Science

Aug 2024 – Present

UPES, India

- Lead the design and delivery of applied analytics, data science and automation curricula, coordinating practical labs, technical resources and project-based learning across multiple stakeholder groups.
- Built a reusable analytics portfolio platform integrating workforce planning, benchmarking, organization diagnostics, model validation and decision-support use cases into deployable business demonstrations.

Innovation Lead / Data Scientist – Global People Analytics

Aug 2021 – Aug 2024

Nestlé, UK & India

- Led the design and delivery of global people-analytics solutions spanning workforce risk, attrition, mobility, workload, planning and organizational decision support, working with business, HR, data and technology stakeholders across markets.
- Translated regional and business requirements into scalable analytical products, reusable data structures, dashboards and standardized workflows, balancing global definitions with market-specific needs.
- Influenced analytical roadmaps by identifying recurring demand, assessing gaps in existing solutions and converting high-value use cases into repeatable products and decision-support capabilities.
- Improved operational reliability through standardized data definitions, quality controls, validation checks, model-assurance practices and documented analytical processes, reducing dependence on manual and inconsistent reporting.
- Coordinated cross-functional contributors across the UK, India and global teams, clarifying priorities, managing delivery expectations, resolving analytical issues and communicating risks, trade-offs and outcomes.
- Championed adoption through executive narratives, stakeholder workshops and practical decision frameworks that helped users move from descriptive reporting toward evidence-based workforce actions.

Live Project: People Analytics Intelligence Lab – strategic workforce planning, causal retention, skills and mobility, employee listening, organization diagnostics and workforce benchmarking.

Marie-Curie Early Stage Researcher – Data Statistics & Decision Systems

May 2019 – Aug 2021

University of York, UK

- Developed Bayesian and uncertainty-aware methods for model assurance, reliability analysis, predictive confidence and responsible AI evaluation in safety-critical decision systems.
- Collaborated across an international research network, aligning technical work packages, research outputs and stakeholder requirements while contributing peer-reviewed and externally funded deliverables.

EXPERIENCE CONTINUED

Data Scientist – Predictive Analytics

Aug 2017 – Nov 2018

Micron, Japan

- Delivered predictive fault-detection and yield-analysis solutions using Python, SQL, Spark/PySpark and classification workflows to support manufacturing operations and process improvement.
- Integrated fabrication, equipment and enterprise datasets, translating operational requirements into analytical models, reusable data pipelines and decision-support outputs for engineering stakeholders.
- Strengthened solution reliability through feature validation, model testing, error analysis and clear communication of operational drivers, limitations and improvement opportunities.

Analyst – Practice Analytics & Benchmarking

Apr 2015 – Aug 2016

Boston Consulting Group, India

- Managed recurring analytical delivery for consulting teams by maintaining benchmark datasets, proprietary model inputs, analytical formulas, quality checks and client-ready output templates.
- Converted repeated case requirements into reusable calculation logic and standardized reporting assets, improving consistency, turnaround and scalability of analytical support.
- Worked with consulting stakeholders to clarify business needs, prioritize requests and deliver fit-for-purpose analysis across proposals, cases and market-estimation initiatives.

Live Project: People & ORG Benchmarking – interactive benchmarking across business functions, organization scales, geographies, workforce cost, productivity and operating-model indicators.

Analyst – Corporate & Business Function Benchmarking

Nov 2012 – Mar 2015

McKinsey & Company, India

- Delivered multi-function benchmarking and organization diagnostics across HR, Finance, IT, Legal, Procurement, Sales Support and Marketing using FTE, cost, productivity and service-delivery measures.
- Supported regional and global consulting teams with location strategy, spans and layers, shared-services, outsourcing, centralization and operating-model redesign analyses.
- Built structured datasets and standardized diagnostic models enabling consistent comparison across functions, geographies and organization scales.

Live Project: People & ORG Benchmarking – interactive benchmarking across business functions, organization scales, geographies, workforce cost, productivity and operating-model indicators.

VBA / Analytics Automation Developer

Jul 2011 – Jul 2012

Brochet, UK

- Developed business-process and reporting automation using Excel, Word, Access, SQL Server, VBA, VSTO and XML, converting manual workflows into standardized tools and reusable business logic.
- Supported testing, documentation and client-site deployment, resolving operational issues and improving the reliability and usability of automated reporting solutions.

EDUCATION

Professional Certificate in Data Science, University of Oxford, UK

2017

M.Sc. Computer Science, University of Southampton, UK

2009 – 2010

B.Tech. Electronics & Communication, Chitkara University, India

2005 – 2009
